

Position: Histology Technician
Location: Ithaca, NY
Date Posted: 28 March 2019
Start Date: April 2019
Job Type: Part time, contract, contract to hire
Compensation: Depends on experience
Contact: Greg Mouchka | greg@ifyber.com

iFyber is seeking a histology technician to assist with R&D projects at the interface between chemistry, biology, and material science. iFyber serves clients in the medical device, diagnostics, and antimicrobial industries. The person in this position will support a research project requiring sectioning, staining and mounting specimens. This is not a diagnostic pathology lab, rather an ongoing R&D development program. This is a contract position, with the potential to be hired on full time.

Duties and Responsibilities

- Section paraffinized samples with an automated microtome
- Appropriately use immunochemistry stains according to documented protocol
- Follow established protocols and work with senior staff to adapt or design new protocols
- Label samples and document results
- Assume responsibility for following safety protocols and keeping work area clean and neat

Requirements

- Demonstrated human or animal tissue histology capability, 3-5 years experience
- Preferred ASCP Histotech or Histotechnologist certificate
- Meticulous attention to detail and documentation skills

About iFyber:

iFyber is a contract research and development organization located in Ithaca, New York. We offer unique expertise at the interface of chemistry, biotechnology and materials science. Our complementary skill sets help our clients efficiently advance innovation and address untapped markets. We thrive at the early stages of product and technology development, with a technical team that provides creative, yet practical, inputs to applied problems using rigorous scientific principles, and an experienced business development team to position outcomes for market introduction under appropriate timelines.
